TRAINING ACADEMY

GANS Training Academy

Established in 2009, the Training Academy offers a broad spectrum of ATS and other aviation-related courses to both national and international clients.

We are the first Training Academy to gain UAE General Civil Aviation Authority and as an ELP Training Organization. Training Academy has been an ICAO TRAINAIR PLUS Program (TPP) Member since 2014, having attained ICAO Regional Training Academy of Excellence. Under the TPP we have delivered over 100 courses.

Our courses reflect a flexible and practical approach to training and can be tailored to suite a client's particular needs. All training packages are kept up to date with the latest concepts and advances within the industry, and can be modified with location-specific context. Training courses can be delivered in Al Ain at the Training Academy or at the client's premises.

ATC Training

GANS Training Academy offers training in all ATC disciplines (ICAO 051, 052, 053, 054 and 055). ATC Tower simulation is carried out in a dedicated facility comprising one 360 degree and two 225 degree Tower simulators. ATC Radar simulation is provided on multiple dual-position radar simulators.

Part Task Trainers (PTT), used for teaching basic procedures and routines, can also be configured as simulators to train in any ATC discipline, as required. Electronic examinations are administered by means of a secure server connected to CBT workstations.

Facilities at the Training Academy are bright and welcoming. Comfortable classrooms are equipped with interactive whiteboards, and trainees have ready access to a CBT room, prayer rooms, canteen, library, and campus nurse.

Other Training

To complement its ATC training courses, the GANS Training Academy provides a range of other courses including Train the Trainer, Supervisor, Examiner, Unit Training Officer and OJTI courses. Appropriate refresher training is also available.

English Language

The English language department features highly experienced teachers who specialize in providing intensive English language training to non-native speakers. General and aviation English language courses can be tailored to meet trainees' specific learning needs.

English Language Proficiency Testing

The Training Academy is a GCAA approved aviation English language proficiency test provider, using Eurocontrol's ELPAC test, the only test endorsed by ICAO. Our experienced examiners are qualified to provide GCAA English language proficiency certification up to ICAO level 6 for pilots and air traffic controllers.
